

RW-MULTI8-FUJI

External Single-Slot 38-Pin Card Reader/Writer with USB2 Interface

General Description

The RW-MULTI8-FUJI drive can read from and write to Fujisoku 38-Pin SRAM memory cards.

The unit interfaces to a USB Port of a PC using the USB cable included.

The RW-MULTI8-FUJI draws the power it needs from the USB Port – no extra power-supply is needed.

The RW-MULTI8-FUJI kit includes a CD-ROM with Windows software for displaying, editing, reading and writing card data.

The compact and rugged reader/writer is supplied as a desktop unit in a robust metal housing.

Typical Applications

- Backing up data from memory cards
- Enabling offline preparation of data for transferring to memory cards.

Installation

The PC Software, which is supplied on a CD-ROM, should be installed before plugging the RW-MULTI8-FUJI into the computer USB Port.

Full details of the installation and operation of the unit are given in the RW-MULTI8-FUJI User's Manual.

Technical Features

Physical	
Dimensions	118mm x 105mm x 32mm
Weight	215 g
Card Slot	Single, without ejector-button
Operating Temp.	0°C to 70°C
